Annual Management Fee	0.60%
Total Expense Ratio (TER)	0.68%
Income Declaration	Accrued Daily, Paid Monthly

Who Should Invest?

The Pointbreak Money Market Fund is suitable for investors seeking a low risk investment that maximises income. It offers a high income yield, capital stability and good liquidity.

Investment Objective

The fund's objective is to achieve an investment return in excess of general money market instruments and funds, while ensuring a high degree of liquidity, capital preservation and below average risk. The fund invests with the four major banking groups in Namibia, the five major banking groups in South Africa, Nampost Namibia and the Namibian,- and South African Reserve Bank. Securities to be included in the portfolio consist of money market instruments, participatory interests in unit trust schemes, bank call and fixed deposits, fixed income securities, government bills and bonds, quality commercial paper and repurchase agreements.

Collective Investment Schemes in Securities (Unit Trusts) are generally medium to long term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. Unit Trust prices are calculated on a net asset value basis, which is the total capital value invested including any income accrual and less any permissible deductions from the portfolio divided by the number of units in issue. Income accruals are made daily and paid out monthly. Purchase and repurchase requests may be received by the manager by 10h00 each business day. Permissible deductions may include management fees, brokerage, NAMFISA levies, auditor's fees, bank charges, trustee fees and RSC levies. A schedule of fees and charges is available on request from Ashburton Unit Trust Management Company. Commission and incentives may be paid and if so, would be included in the overall costs.

Fund Commentary

March has been a volatile month for capital markets. Interest rate expectations shifted from two 25bp rate cuts in 2026 by the South African Reserve Bank (SARB) at the start of the month to potential rate hikes by year-end, driven by a 63% surge in oil prices during the month. The US Federal Reserve Bank held its policy rate steady, awaiting further data points on the duration of the war and its effect on energy prices and resulting inflation. The SARB's Monetary Policy Committee (MPC) unanimously voted to keep the repo rate steady at 6.75% at its March meeting. The central bank stressed that it would look past the immediate impact of higher oil prices on inflation, while remaining alert to possible second-round effects. Locally, consensus is that the Bank of Namibia's MPC will also leave rates unchanged at its April meeting.

Inflation eased, with Namibia's annual rate slowing to 2.4% in February (from 2.9% in January) and South Africa's to 3.0% (January: 3.5%).

Namibian Treasury Bill (TB) yields traded down 6bps on average over the month, trailing South African TBs, which traded up 59bps on average, as investors price in an increase in inflation premium.
